Introduction

Blockchain Technology (BCT) has recently been envisaged as backbone technology that can revolutionise the way financial transactions are performed reducing the operational delays through effective disintermediation. The technology enables multiple transacting entities to work on a single system through its distributed ledger in a tamper-evident manner. Globally, Banks and other Financial Institutions are actively analysing existing systems to make them more efficient utilising the distributed system characteristics of Blockchain. The technology is still in its infancy and multiple PoCs on Banking Applications are being explored. Some of the applications that are being explored include cross-border payments, loan syndication, C-KYC, trade-finance, etc.

Objectives

- ★ To introduce the fundamental concepts, consensus techniques, security and privacy issues behind the technology and their integration that makes it work
- ★ To understand the characteristics of high potential use-cases and their business impact
- ★ To explore the features of different BCT platforms.

Contents

- ★ Crypto Primitives used in BCT
- ★ Distributed Computing Algorithms
