RECENT CYBER CRIMES AND DEFENCES

February 23 - 26, 2021

Introduction

Banks and other Financial Institutions have increasingly become targets for cyber-attacks as criminals eye financial gain. Attackers target infrastructures of these institutions. Recent years have seen a series of supply chain attacks, malware based attacks like crypto-ransomware as well as attacks on SWIFT infrastructure.

There are cyber-attacks exploiting customers too. Examples include phishing/vishing scams or exploiting vulnerabilities of devices that customers are using. Moreover, in the challenging time of COVID-19 pandemic, when employees are working from home, cyber criminals are looking to exploit weaknesses in tools, processes, and human errors to gain illegal access to the systems and causing havoc in organisations. So organisations need to adopt manifold strategies to combat cyber-attacks. On the one hand, they have to arrest the technology vulnerabilities to protect their infrastructure and on the other, they have to conduct awareness initiatives for their employees and customers.

Objectives

The objective of this e-programme is to enlighten the participants with the modus operandi of recent cyber attacks and make them aware of defence strategies to prevent recurrences. In turn, these steps will help organisations strengthen their cyber security posture significantly.
