SECURITY OPERATIONS CENTRE

Programme Coordinator: **Dr. V. Radha**

APRIL 29 - MAY 01, 2024

OFFLINE MODE

Introduction

Information Security is changing at a rapid pace. Banks made substantial progress in improving their defenses over a period. Banks reached certain level of maturity in deploying security point solutions like antivirus, IDS, IPS, patching and encryption. These solutions are key in combating the known attacks in their individual capacity. These solutions lack a greater visibility and scope in detecting a wider threat. A central control like SOC can enable information security functions to respond faster, work more collaboratively and share knowledge more effectively. SOC tools and technologies work at four conceptual layers like Data/Event Collection, Data/Event Storage, Incident Monitoring and Analysis and Work flow management. This program focusses on giving in-depth knowledge of the interplay among people, processes and technologies required in making SOC a successful and effective.

Objective

To bring awareness of SOC. To discuss in depth the issues and challenges of integrating the SOC with existing IT and Security infrastructure. To provide hands on demos and experiments on SOC using open source and commercial products.
